Dec 2025 – Feb 2026

- Developed GraphQL APIs with Express.js for mobile apps.
- Learned clean folder structure and backend best practices.

Projects

ATM Transaction System with Facial Recognition

- **Situation:** Rising fraud in ATM transactions required stronger identity verification.
- **Task:** Build a secure interface that prevents unauthorized access.
- **Action:** Designed and implemented a facial recognition login system using **TensorFlow, Flask, and PHP**, integrating biometric verification with real-time transaction handling.
- **Result:** Delivered a prototype that enhanced security by reducing the risk of fraudulent transactions. [GitHub Link](#)

Typewriting Institute Management

- **Situation:** Institutes needed a way to track typing skill progress for learners.
- **Task:** Create a desktop application to monitor speed and accuracy.
- **Action:** Developed a training app with **VB.NET and MySQL**, featuring speed tests, accuracy tracking, and analytics dashboards.
- **Result:** Improved learner engagement by providing measurable progress reports and performance insights. [GitHub Link](#)
